

FREE COMPOSTING WORKSHOP!

Tuesday, February 9th, 2010 at 7:00PM

Old Worthington Library (820 High St) Meeting Room

**Note: the library generously makes its meeting room available for community events like ours free of charge but asks that we do NOT park in the library parking lots.*

Why Compost? Backyard composting can be the most economical and environmental way to manage organic materials produced at home.

Diverts Organic Material from Landfills – Composting is one of the oldest, easiest and “greenest” methods of recycling! While saving landfill space, you can use one of Mother Nature’s best ways to reduce and reuse.

Saves Money – Material that would normally go into your garbage can go into the compost bin producing nutrient rich soil amendments for use in your garden, and all for free!

Improves Soil and Plant Health, Conserves Water and Reduces Use of Garden Chemicals – Using compost helps improve any soil type, and produces healthier plants requiring less water, fertilizer and thus helps keep harmful pollutants out of our local waterways.

Attendees will learn safe, simple and effective methods to start their own home composting program
